join us for the
7th European Rotavirus Biology Conference
18 - 21 June 2017 - Cork, Ireland
erbm2017.com
Welcome to the 7th European Rotavirus Biology Meeting (ERBM) to be held in Cork, June 18th to June 21st, 2017. This 7th ERBM follows on from a successful series of international rotavirus meetings that began in Paris, 2005 and continued in Stockholm, 2007, Lock Lomond, 2009, Reggio Calabria, 2011, Valencia, 2013 and Dijon, 2015. These international meetings provide a forum for scientists and medical professionals involved in all aspects of rotavirus research. The aim is to stimulate exchange of information and promote collaborations in all aspects of rotavirus research. This meeting will introduce new and exciting developments in rotavirus biology which are likely to inspire future research.

Our keynote speaker is Professor Mary Estes, who will discuss ‘Human Intestinal Enteroids: A New Model to Study Human Rotavirus Infections, Host Restriction and Pathophysiology’. I am sure you will find the program stimulating. The significance of rotavirus research is reflected in the number of participants. Over 100 participants originating from 28 countries spread over 5 continents.

Cork is the international gateway to Ireland’s Wild Atlantic Way, with Cork International Airport serving over 50 international destinations. Cork is described as being ‘sophisticated, vibrant and diverse’ and is recognised as the ‘Food Capital of Ireland, home to the birthplace of modern Irish Cuisine at Ballymaloe, the famed 18th century English Market and the best artisan food producers in the country. It is renowned for the internationally acclaimed Jameson Whiskey Distillery and Fota Wildlife Park’. Don’t take our word for it – to quote Lonely Planet ‘Everything good about Ireland can be found in Country Cork’.
